

Optiray® 300

Ioversol Injection USP 64%, 300 mg/mL organically bound iodine

Not for Intrathecal Use

Description

Optiray® 300 is an injectable low osmolar, nonionic, contrast media agent which is intended for intravascular administration. Optiray® 300 is a prescription drug that is intended to be therapeutically and biologically inert when injected into the body for use in organ or tissue enhancement in CT, X-Ray and Fluoroscopy imaging procedures. Each milliliter of Optiray® 300 contains 636 mg of ioversol, 3.6 mg of tromethamine as a buffer and 0.2 mg of edetate calcium disodium as a stabilizer.

Indications and Applications

Cerebral Arteriography, Peripheral Arteriography, Venography, Excretory Urography, CT Head and Body.

Important Safety Information

Serious or fatal reactions have been reported due to the inadvertent intrathecal administration of iodinated contrast media, such as Optiray. Serious, rarely fatal, thrombotic events causing myocardial infarction or stroke have been reported.
